

## What is Claimed:

1                   1.       In a device for dispensing a fluid spray of the type including a  
2   liquid reservoir in the form of a bottle adapted to be gripped by a users hand and a  
3   spray mechanism including a dip or siphon tube extending into fluid contained in said  
4   reservoir, the improvement comprising: first means disposed proximate a bottom  
5   surface of said reservoir to trap a quantity of fluid and prevent said quantity of fluid  
6   from spreading along a vertical wall of said reservoir when said reservoir is moved  
7   from a vertical to a horizontal position by a user, and said siphon tube positioned so  
8   that an inlet end of said siphon tube is below and proximate said first means.

1                   2.       A device according to claim 1 including a second means to  
2   maintain said siphon tube with its inlet below said first means and adjacent said  
3   bottom surface of said reservoir when said siphon tube is inserted into said reservoir  
4   and when said reservoir is in a vertical or horizontal position or a position in between  
5   vertical and horizontal.

1                   3.       A device according to claim 1 wherein said first means is a  
2   baffle fixed to vertical wall of said reservoir and so constructed and arranged to form  
3   a well or second fluid reservoir within said reservoir to trap a quantity of fluid when  
4   said reservoir is held in a horizontal position.

1                   4.       A device according to claim 2 wherein said second means is a  
2   baffle fixed to walls of said reservoir said baffle so constructed and arranged to

3 intercept and position said siphon tube as it enters said reservoir and to permit fluid  
4 in said reservoir to flow into said well or second fluid reservoir.

1 5. A device according to claim 1 wherein said reservoir is a bottle.

1 6. A device according to claim 1 wherein said reservoir is a bottle  
2 having a portion adapted to be gripped by a user.

1 7. A device according to claim 6 wherein said bottle has said  
2 portion proximate an opening to receive and position said spray mechanism.

1 8. A device according to claim 7 wherein said spray mechanism is  
2 trigger activated.
